

Demand for tactical, air defense and missile defense systems has soared as the Department of Defense supports key allies and partners and looks to replenish U.S. stockpiles. Since L3Harris completed the acquisition of Aerojet Rocketdyne (AR) in July 2023, the company has made significant investments to improve solid rocket motor delivery and expand production capacity — modernizing facilities, automating manufacturing processes, bolstering sub-tier suppliers, strengthening its workforce and pursuing innovative collaborations.

Solid rocket motor production is up

On-time delivery is up

Reduced late deliveries by nearly half

Delivering ahead of contract for several programs

Record months of deliveries for 5 programs

Automating equipment and robotics for repeatable, high quality, scalable, safe operations

Maximizing efficiency and enhancing workflow by improving factory layouts — reducing motor manufacturing distance traveled by 80%

Using 3D modeling for rapid prototyping and leveraging additive manufacturing

Incorporating digital transformation to enable better, faster data-driven decision making
